

# France Medical announces a world revolution for Dry-Eye syndrome using Intense Pulsed Light (I.P.L.) technology

France Medical has announced the launch of the E-Eye, a new IPL device dedicated to optometrists and ophthalmologists for dry-eye syndrome. E-Eye has been developed and clinically tested on over 150 patients with exceptional results. It is an efficient treatment of the Meibomian gland dysfunction radically different from existing treatments.

## France Medical

France Medical is specialised in IPL technology dedicated to beauty and health professionals. Based in Brisbane, it is the exclusive distributor of E-Swin (the world leader in IPL technology) medical devices in Australia, New Zealand and Japan. France Medical offers a huge range of 'Made in France' IPL products from the latest technology adapted to different kind of applications such as hair removal (hirsutism), collagen stimulation, pigmentation and now dry-eye syndrome.

## The pathology

The dry-eye syndrome is a common pathology caused by conditions of the modern life (watching computers screens, driving cars, air pollution, air conditioning etc.). It reaches 5% to 10% of the population. It is generally the result of a Meibomian gland dysfunction that causes excessive tear evaporation.

## The E-Eye

### How does it work?

E-Eye generates a polychromatic-pulsed light by producing perfectly calibrated and homogeneously sequenced light pulses. This light is precisely sets to stimulate the Meibomian glands in order for them to return to their normal function.

### The treatment

A session takes only a few minutes. The optometrist or ophthalmologist adjusts the goggles on the patient's eyes and applies the hydrogel on the skin. A series of 4 flashes are applied under the lower eyelid.

### Simple & fast

The E-Eye uses intuitive and simple software managed from a LCD touch screen. It starts in a few seconds and does not require any pre-heating.

### Instant improvements

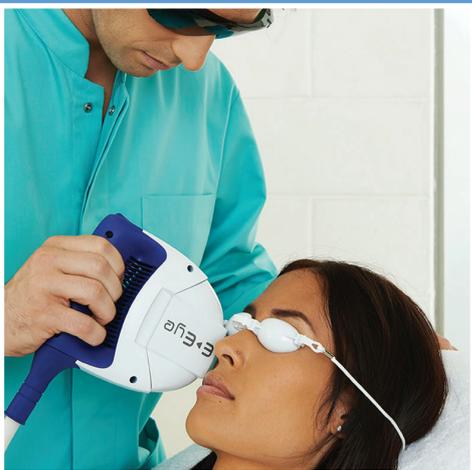

The E-Eye stimulation leads to the Meibomian glands returning to their normal function only a few hours after the treatment. The effect is cumulative.

### Safe

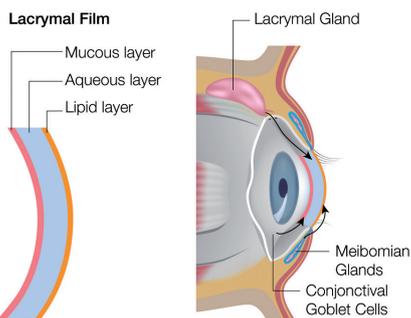

Like all our IPL devices, the E-Eye is made in France and medically certified (Medical CE certification). It benefits from a cutting edge technology and a 2-year manufacturer's warranty.

### Treatment results

The efficient is nearly constant on all forms of Meibomian Glands Dysfunctions. In a clinical study made in France in 2011/2012 on patients (average age 67), the results showed a very noticeable improvement with a 90% satisfaction rate on the first two treatments. 45% of patients originally classified as level 2 (Oxford classification) have, after instillation of fluoresceine, been improved by one or two levels. 81% of patients from level 1 have improved by one level.

E>Eye stimulates the Meibomian glands in order for them to return to their normal function.
